Period fo	The MAILING DATE of this communication app					
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filled, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

This action is responsive to Applicant's filing of 10/27/2003, which has been entered into the electronic file of record.

Remarks

The Examiner summarizes his position as follows: It is known (and even admitted by the applicant in the background) that POS systems can electronically convert a check and these systems are operable whether or not there is a face-to-face transaction. Templeton et al. (US 5,679,938) is one example.

It appears to the Examiner that the fundamental difference the above and the Instant Invention (as embodied in at least claim 1) has to do with the printing or non-printing of a receipt. The Examiner considers this an obvious difference.

The Examiner notes that some POS terminals make receipt printing optional.

Furthermore, a rational operator would be motivated to choose not to generate a receipt if there is no customer present to receive it.

In addition, even if a POS terminal did not give the operator an option regarding receipt printing, an operator could simply remove the paper from the receipt printer with the motivation to save paper that would end up being thrown out.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1, 4-6, 9-13, 16-20, 23-26 and 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Templeton et al. (US 5,679,938) as applied to claim 1 above, in view of Royer et al. (US 2004/0155101).

Re claim 1:

Application/Control Number: 10/695,412

Art Unit: 2876

For the sake of clarity, individual limitations of the claim are listed below in italics followed in each case by a discussion of the relevant prior art teachings.

A system for electronically processing a check transaction involving a merchant, comprising:

See column 1, lines 5-10 of Templeton et al.:

"The present invention relates generally to check acceptance systems, and relates more particularly to methods and systems for interactive check authorizations using an electronic transaction terminal for acquiring transaction data at the point of sale."

a point-of-sale device that electronically converts a check wherein the point-of-sale device is capable of generating a receipt;

See column 1, lines 5-10. Regarding receipt printing, Templeton et al. makes clear (column 16, line 52; column 17, lines 15-20) that receipt printing capability is present.

a check processing service linked to the point-of-sale device to receive information about the converted check from the point-of-sale device and perform an authorization process on the check transaction such that the check processing service notifies the merchant via the point-of-sale device of an authorize or decline decision of the authorization process;

See figure 1, where a check processing service is clearly shown.

See column 12, lines 40-55 of Templeton et al.:

"The check acceptance service 20 includes the authorization host computer

3 5, and associated telecommunications equipment (not shown) that allows

Application/Control Number: 10/695,412

Art Unit: 2876

merchant's terminals to communicate with the authorization host computer.

Those skilled in the art will understand that the associated telecommunications equipment includes call routing systems, front end processors, and other equipment needed to answer incoming calls, and route and format data included in incoming transaction packets.

Generally described, the primary function of the check acceptance service's authorization host computer 35 is to effectively differentiate between good and bad checks."

As seen in the abtract, approval or decline notification is the result of the check acceptance process: "If the transaction is approved or declined, a response packet including authorization indicia is transmitted to the terminal."

wherein the point-of-sale device generates a receipt if the check transaction is authorized and the check transaction involves a face-to-face transaction and wherein the point-of-sale device does not generate a receipt if the check transaction involves an accounts receivable check transaction even if the accounts receivable check transaction is authorized by the check processing service.

This feature is lacking. Templeton et al. lacks a clear showing that the device generates a receipt if the transaction is a face-to-face transaction and does not generate a receipt if the transaction is not a face-to-face transaction.

Royer et al. is employed merely for the showing that receipt printing in POS terminals can be optional. Royer teaches (paragraph [0081]) that after a transaction is completed "A receipt is optionally printed for the cardholder."

In view of Royer et al.'s teaching, it would have been obvious to one of ordinary skill in the art at the time the invention was made to make the receipt printer of Templeton et al. optional, so that a user can choose to either print a receipt or not print a receipt, because (a) some customers may not want a receipt and (b) in the case of processing checks when no customer is present, a rational operator would be motivated to choose not to generate a receipt when there is no customer present to receive it.

In addition, even if a POS terminal did not give the operator an option regarding receipt printing, an operator could simply remove the paper from the receipt printer with the motivation to save paper that would end up being thrown out.

Re claim 4: There is (column 5, lines 20-30 of Templeton et al.) a risk scoring algorithm.

Re claim 5: Two levels of service are clearly conveyed in Templeton et al. In one,

Templeton et al. makes his own risk assessment (an offline mode). In another, an outside

authorizing system makes the necessary determinations. Clearly, if an outside system authorizes

a check, it must take responsibility for that authorizing.

Re claim 6: See discussion re claim 1, above.

Re claims 9 and 10: See discussion re claims 4 and 5 above, respectively.

Re claims 11-13 and 16: See discussion re claim 1, above.

Re claims 17 and 18: See discussion re claims 4 and 5 above, respectively.

Re claim 19: See discussion re claim 1, above.

Re claims 20, 24, 25 and 26: See discussion re claim 1, above.

Re claims 23 and 30: See discussion re claim 4, above.

Claims 2, 3, 7, 8, 14, 15, 21, 22 and 27-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Templeton/Royer as applied to claim 1 above, in view of Houvener et al. (US 5832464).

Re claim 2:

See column 5, lines 45-50 of Templeton et al.: "The terminal also provides a magnetic ink character recognition (MICR) reader for reading check data from a check."

Lacking in Templeton is a teaching of imaging of the check.

Houvener et al. teaches (column 12, lines 5+): "In addition to having the capability of reading the checking account and routing information off of the check, the disclosed system would include a check scanner capable of reading other printed information off the face of the check, such as name, address, etc (step 204). This may be done either using built-in OCR capabilities or through the use of bit map or other imaging techniques."

In view of Houvener's teachings, it would have been obvious to one of ordinary skill in the art at the time the invention was made to include the old and well-known check optical scanning in the teachings of Templeton/Royer because this can substantially increase the speed of check processing by avoiding manual data entry. It also allows a copy of the check to be made for security purposes.

Re claim 3: The Examiner is not aware of any special processing associated with accounts receivable (AR) checks except for the printing or non-printing of receipts. As the Examiner has already argued re claim 1 above, turning receipt printing on or off would have

been obvious. As Royer has shown, it is known in prior art POS devices for receipt printing to be optional.

Re claims 7 and 8: See discussion re claims 2 and 3, respectively, above.

Re claims 14 and 15: See discussion re claims 2 and 3, respectively, above.

Re claims 21 and 27: See discussion re claim 2, above.

Re claims 22, 28 and 29: See discussion re claim 3, above.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kolls (US 6,601,037) is another example where receipt printing in POS device is clearly shown to be optional. See figure 9B, ref. 726. Also, in the specification, in the discussion of figure 9B, Kolls states, "Processing in block 726 terminates a transaction by disabling the appropriate vending machines and printing a transaction receipt. **Printing of a receipt can be optional or at the user's request.**"

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel A. Hess whose telephone number is (571) 272-2392. The examiner can normally be reached on 8:00 AM - 5:00 PM M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael G. Lee can be reached on (571) 272-2398. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
